

RecallFlow — Complete SaaS Business Blueprint

Overview

Product Idea

RecallFlow is a healthcare-focused SaaS platform that helps clinics automatically recover missed patient calls using SMS automation and AI-powered conversation handling.

The product is NOT an EHR replacement.

Instead, it acts as an operational automation layer that works alongside existing EHR systems used by clinics in the United States.

The core goal:

Recover lost patients and revenue from missed calls automatically.

Why This Product Makes Sense

US clinics frequently miss calls because:

- front desk staff are busy
- staff shortages
- after-hours calls
- high call volumes
- multiple clinic locations
- providers unavailable

When calls are missed:

- patients often go to competitors
- appointments are lost
- revenue is lost
- no follow-up occurs

Most EHR systems:

- are not optimized for missed-call recovery
- do not provide intelligent follow-up workflows
- are slow and outdated in communication automation

RecallFlow solves this specific operational problem.

Product Positioning

DO NOT Position As

- AI chatbot
- another EHR
- generic CRM
- communication tool

Position As

"Recover missed patient calls automatically."

or

"Never lose a patient because of a missed call."

or

"AI-powered missed call recovery for clinics."

The positioning must focus on:

- recovered appointments
 - recovered revenue
 - operational efficiency
 - reduced patient loss
-

Target Market

Best Initial Niches

Start with ONE niche only.

Recommended:

- dental clinics
- med spas
- chiropractors
- cosmetic clinics
- physiotherapy clinics

These businesses:

- depend heavily on phone calls
- lose money from missed calls
- are easier to sell to

- have simpler operational structures
- understand ROI quickly

Avoid hospitals initially.

Core Product Workflow

Step 1 — Patient Calls Clinic

Patient calls clinic phone number.

Step 2 — Clinic Misses Call

If no one answers within:

- 15 seconds
- or 30 seconds

Twilio webhook triggers missed-call workflow.

Step 3 — Automatic SMS Sent

Example:

"Sorry we missed your call to ABC Dental. How can we help you today?"

Step 4 — AI Handles Initial Conversation

AI categorizes patient intent.

Examples:

- appointment request
- insurance question
- billing issue
- emergency inquiry
- prescription request

Step 5 — System Creates Action

Possible actions:

- notify staff
- send booking link
- create callback request
- escalate urgent requests
- provide office hours

Step 6 — Dashboard Updates

Clinic sees:

- missed calls
 - recovered leads
 - booked appointments
 - estimated recovered revenue
 - response rates
-

MVP Scope

IMPORTANT: Do NOT overbuild.

The first version should solve ONE problem extremely well.

MVP Features

1. Missed Call Detection

Requirements:

- Twilio voice webhook
- call status handling
- unanswered call detection

Core logic:

- if call unanswered
 - trigger SMS automation
-

2. Automatic SMS Reply

Features:

- instant reply after missed call
 - customizable templates
 - after-hours automation
 - callback confirmations
-

3. AI Intent Classification

Use OpenAI for:

- appointment intent
- billing intent
- emergency intent
- insurance intent

Simple prompting is enough initially.

Do NOT build complex AI agents initially.

4. Staff Notifications

Notify clinic staff through:

- dashboard alerts
 - email
 - SMS
 - Slack
-

5. Admin Dashboard

Dashboard should show:

- missed calls
- SMS responses
- recovered leads
- callback status
- estimated revenue recovered
- conversion analytics

This dashboard is critical for selling the product.

6. Multi-Location Support

Each clinic may have:

- multiple locations
- multiple phone numbers
- multiple staff members

Architecture should support multi-tenancy from day one.

Future Features (Post-MVP)

DO NOT build these initially.

Future roadmap:

- AI voice receptionist
 - voicemail transcription
 - appointment scheduling
 - multilingual conversations
 - analytics intelligence
 - EHR integrations
 - call recording analysis
 - patient recall campaigns
 - review automation
 - payment reminder workflows
-

Technical Architecture

Backend

Language:

- Golang

Why:

- scalable
 - fast
 - lightweight
 - ideal for APIs and concurrency
-

Frontend

Framework:

- Next.js

Purpose:

- admin dashboard
 - onboarding
 - analytics
 - settings
-

Database

Use:

- PostgreSQL

Why:

- relational workflows
 - analytics support
 - multi-tenant capability
 - reliability
-

Queue / Background Jobs

Use:

- Redis

Purpose:

- SMS workflows
 - retries
 - notifications
 - async processing
-

Cloud Hosting

Use:

- Amazon Web Services (AWS)

Initial setup:

- EC2
 - RDS PostgreSQL
 - S3 for storage
-

Messaging Infrastructure

Use:

- Twilio

Services:

- Voice webhooks
 - SMS APIs
-

AI Layer

Use:

- OpenAI APIs

Use AI only for:

- intent detection
- response generation
- categorization

Avoid expensive agentic architectures initially.

Suggested Database Entities

Core entities:

- organizations
 - locations
 - users
 - phone_numbers
 - calls
 - sms_messages
 - conversations
 - AI classifications
 - notifications
 - analytics
-

Suggested MVP Timeline

Week 1

Build:

- authentication
- organization setup
- Twilio integration
- voice webhook

- SMS sending
-

Week 2

Build:

- AI intent classification
 - dashboard
 - notifications
 - multi-tenant support
-

Week 3

Build:

- onboarding
- analytics
- Stripe billing
- production deployment
- landing page

Launch immediately after.

Pricing Strategy

Suggested Plans

Plan	Price
Solo Clinic	\$99/month
Multi-Provider	\$299/month
Multi-Location	\$999/month

Revenue Potential

Scenario 1

10 clinics at \$299/month:

- ~\$3,000/month

Scenario 2

50 clinics:

- ~\$15,000/month

Scenario 3

200 clinics:

- ~\$60,000/month

This business can scale strongly because:

- recurring revenue
 - low infrastructure costs
 - low support requirements
 - strong ROI positioning
-

Go-To-Market Strategy

IMPORTANT

Do NOT start with paid ads.

Initially focus on:

- cold outreach
 - demos
 - direct sales
 - niche targeting
-

Best Sales Strategy

Step 1 — Build Simple Landing Page

Include:

- missed call problem
 - ROI examples
 - product demo
 - simple pricing
 - call-to-action
-

Step 2 — Create Demo Videos

Use Loom videos.

Demonstrate: 1. missed call occurs 2. SMS sent automatically 3. AI responds 4. dashboard updates

This demo alone can sell the product.

Step 3 — Cold Outreach

Example pitch:

"We help dental clinics recover missed patient calls automatically."

Target:

- clinic owners
 - practice managers
 - office administrators
-

Step 4 — Offer Free Trial

Recommended:

- 14-day free trial

Goal:

- show recovered patients quickly
-

Step 5 — Show ROI Dashboard

The dashboard should show:

- missed calls recovered
- appointments booked
- estimated recovered revenue

This is the strongest selling point.

Why This Business Is Good

Advantages

- easy to explain
 - easy ROI
 - fast MVP
 - recurring revenue
 - operationally simple
 - scalable
 - no EHR competition
 - strong demand
-

Biggest Challenge

The hardest part is NOT coding.

The hardest part is:

- sales
- distribution
- customer acquisition

You must learn:

- cold outreach
 - product demos
 - onboarding
 - positioning
-

Branding Strategy

Product Name Recommendation

RecallFlow

Why:

- healthcare-friendly
- professional
- scalable
- memorable
- operational sounding

Avoid names involving:

- GPT
- AI
- bot
- chat

Healthcare businesses prefer trust-oriented branding.

Suggested Domains

Recommended:

- recallflow.ai
- recallflowhq.com
- getrecallflow.com

Recommendation:

- buy multiple variants if affordable
-

Recommended Company Name

RecallFlow Technologies LLC

Structure:

Type	Name
Legal Company	RecallFlow Technologies LLC
Product	RecallFlow
Website	recallflow.ai

Company Registration

Can An Indian Citizen Register A US Company?

YES.

You can:

- own 100%

- operate remotely from India
- accept USD payments
- use Stripe
- sell to US customers

You do NOT need:

- US citizenship
 - US office
 - US employee
-

Best Company Structure

Recommended:

- Wyoming LLC

Why:

- cheaper
- simpler
- lower maintenance
- ideal for SaaS businesses

Alternative:

- Delaware LLC

Usually preferred later for venture funding.

Recommended Company Formation Services

Options:

- Stripe Atlas
- Firstbase
- Doola

These services help with:

- LLC registration
 - EIN setup
 - bank setup
 - compliance
-

Payments Setup

Use:

- Stripe

Purpose:

- subscriptions
- recurring billing
- invoices
- USD payments

Suggested SaaS Stack

Category	Technology
Backend	Golang
Frontend	Next.js
Database	PostgreSQL
Queue	Redis
Hosting	AWS
SMS/Voice	Twilio
AI	OpenAI
Payments	Stripe

Key Advice

DO NOT

- overbuild
- wait 8 months to launch
- build huge AI agents initially
- compete with EHRs
- build unnecessary features

DO

- launch fast

- sell early
 - solve one painful problem
 - get first paying customers quickly
 - iterate using real feedback
-

Long-Term Expansion Possibilities

Future expansion:

- AI receptionist
- clinic analytics
- patient recall automation
- review generation
- operational intelligence
- revenue recovery
- scheduling automation
- outbound campaigns

This allows RecallFlow to evolve into a larger clinic operations platform over time.

Final Strategic Recommendation

Initial goal:

- build MVP fast
- launch in 2–4 weeks
- acquire first 3–5 clinics
- validate product-market fit

Do NOT aim for perfection initially.

The first version only needs to:

- detect missed calls
- send SMS
- collect responses
- notify clinic staff

That alone is valuable and sellable.

The biggest advantage is speed of execution.
